Appl. No. 10/812,243 Amdt. Dated 20 July 2007 Reply to Office action of 20 April 2007

## Listing of Claims:

## Listing of Claims:

(Previously presented) An ultrasound system comprising:

an ultrasound probe comprising a plurality of transducer elements configured for sensing ultrasound signals and converting the ultrasound signals to analog electrical signals, the ultrasound probe configured for transmitting the analog electrical signals:

an optical conduit comprising an electro-optic modulator configured for

- (a) receiving the analog electrical signals.
- (b) receiving optical signals from a light source, and
- (c) modulating the optical signals with the analog electrical signals:

wherein the optical conduit is configured for transmitting the modulated optical signals to an optical detector.

- (Previously Presented) The ultrasound system of claim 1, wherein the electro-optic modulator comprises a plurality of electro-optic modulators.
- (Previously Presented) The ultrasound system of claim 2, wherein the electro-optic modulators each comprise a polymer material or silicon.
- (Original) The ultrasound system of claim 2, wherein the ultrasound probe further comprises:

an amplifier configured for amplifying the analog electrical signals.

 (Previously Presented) The ultrasound system of claim 2, wherein the plurality of transducer elements comprises a plurality of sets of transducer elements and wherein the optical conduit further comprises:

a plurality of multiplexers, each configured for coupling a corresponding one of the electro-optic modulators and a corresponding set of the transducer elements and conducting electrical signals of a selected one set of transducer elements to the corresponding one of the electro-optic modulators.

 (Previously Presented) The ultrasound system of claim 5, wherein the ultrasound system further comprises a plurality of demultiplexers configured for demultiplexing the optically modulated analog signals received from the electro-optic modulators. Appl. No. 10/812,243 Amdt. Dated 20 July 2007 Reply to Office action of 20 April 2007

- (Original) The ultrasound system of claim 1, wherein the ultrasound probe further comprises a plurality of cooling lines configured for maintaining a probe temperature.
- 8. (Original) The ultrasound system of claim 1, wherein the light source comprises a laser source.
- (Previously Presented) The ultrasound system of claim 8, further comprising the optical detector, wherein the optical detector is configured for converting the optically modulated analog signals to corresponding digital signals.
  - (Previously Presented) A method for generating an image, the method comprising: sensing ultrasound signals.

converting the ultrasound signals to analog electrical signals;

receiving optical signals from a light source:

modulating the optical signals with the analog electrical signals to generate a corresponding plurality of optically modulated analog signals:

converting the plurality of optically modulated analog signals to a corresponding plurality of digital signals; and

processing the plurality of digital signals to generate the image.

- 11. (Original) The method of claim 10, wherein the plurality of signals comprise ultrasound signals.
- (Previously Presented) The method of claim 11, wherein sensing further comprises amplifying the electrical signals.

13-16. (Canceled)
